

RAISE YOUR GAME
HYVA PERFORMANCE

THE PERFECT SOLUTION
FOR APPLICATIONS
ON ALL VEHICLES

We Move your World

From light, compact machines, to solutions which deliver the ultimate levels of precision and lifting capacity, Hyva truck-mounted cranes are all built on the foundations of high performance, reliability, ease of use and safety. That's why they're among the most widely-used loader cranes in the world.

KENNIS ROLLOADER CRANES

Allowing the operator to cover a wide area with a limited number of extensions, Kennis cranes offer a number of significant advantages, including shorter loading and unloading times, high proximity to the load and high payloads. The crane can easily be removed from the trailer and installed on another. The rollover cranes from Kennis (cranes by Hyva) are renowned for their reliability and durability.

Hyva: Your Trusted Partner.

Hyva Worldwide

Founded in 1979, Hyva is today one of the world's leading providers of innovative and highly efficient transport solutions for the commercial vehicle and environmental service industries. With over 30,000 customers and more than 40% of the global front-end tipping cylinders segment for heavy duty trucks, the company operates in more than 110 countries, has more than 30 fully owned subsidiaries, and a manufacturing base that includes 14 production facilities across China, India, Brazil and Europe. We are committed to the development, production, marketing and distribution of solutions for the movement and transportation of goods.

The growth and success of Hyva is built on two key aspects of its operation: the quality and innovative nature of the company's solutions, and the excellence of its customer support. The first of these, product quality, is illustrated by the fact that Hyva today offers the strongest front-end hydraulic

telescopic cylinder in the world, as well as a full range of double acting cylinders, fixed mounted and rolling truck cranes, container lifting systems (hookloaders and skiploaders) and waste collection units. They are solutions which are used worldwide across a range of sectors including transport, construction, mining, materials handling and environmental services providers.

Service quality, too, is a fundamental part of the Hyva business philosophy: with operations in more than 110 countries, the company operates one of the world's most extensive customer support networks in the industry. It is a network which has earned Hyva an international reputation for excellence in customer care.

Environmental protection

As part of our corporate responsibility Hyva is dedicated to protect the environment.

Painting filter

The air in and around the painting area is passed through a series of filters to remove the harmful chemicals from the air. Air quality is checked regularly to confirm correct operation of the system.

Heating system

Large spaces are more efficiently heated from below, rather than from above. In-floor heating is installed in most of our production area to make the most efficient use of energy.

ISO14001 Certification

Hyva is a certified ISO 9001 and ISO 14001 company by Lloyd's Register Quality Assurance (LRQA): the world's leading provider of independent assessment services including certification, validation, verification and training across a broad spectrum of standards and schemes, with recognition from over 50 accreditation bodies.

Certificate of Approval

This is to certify that the Management System of:
H.C.E. S.r.l. Unico Socio
 Via Einstein, 4/6, 42026 Poviglio, Italy

has been approved by LRQA to the following standards:
 ISO 9001:2015

P.G. Cornelissen - Area Manager North Europe
 Issued By: Lloyd's Register Nederland B.V.
 for and on behalf of: Lloyd's Register Quality Assurance Limited

This certificate forms part of the approval identified by approval number: 0023911

Current Issue Date: 1 November 2018	Original Approvals:
Expiry Date: 31 October 2021	ISO 9001 – 15 May 1991
Certificate Identity Number: 10093487	

Approval Number(s): ISO 9001 – 0023911-009

The scope of this approval is applicable to:
 Design, manufacture and service of hydraulic powered loader cranes for trucks
 and marine applications. Manufacture and service of hook loader and roller crane.

 001

Lloyd's Register Group Limited, its affiliates and subsidiaries, including Lloyd's Register Quality Assurance Limited (LRQA), and their respective officers, employees or agents, are not liable to the extent of this document or any part thereof for any loss, damage or expense caused by reliance on the information or advice in this document or for any other reason, unless the person has agreed in writing with the relevant Lloyd's Register entity for the provision of the information or advice and that other any responsibility or liability is not excluded or limited. Lloyd's Register Quality Assurance Limited, 1 Trinity Park, Boulevard Lane, Borehamwood B95 7TB, United Kingdom.

Preserving the earth for future generations

ISO14001 certification achieved by the factory in Poviglio (Italy) allowed Hyva to contribute to protect and preserve the environment in which we live.

In the last five years we have saved 212* tons of paper and preserved 3,180 trees. We have recycled 200* tons of wood. We saved 93,280,000* litres of drinking water. We recycled 58* tons of plastic saving 193* tons of oil.

In the last five years we saved 1,611,200* kwh and we recovered 183* tons of iron. We reduced CO2 emission in the air by 25%*.

* Certified source

From concept to field

Crane Design

Our research and development department uses the latest technology to design new products.

Each individual component of the crane is designed using a 3D CAD system which can test crane movements and ensure that it has a functional geometry.

Structural verifications

During the design phase, FEM (Finite Element Method) is used to analyse the crane structure and loading conditions and obtain strength-to-weight optimisation.

Prototype development

Each component is checked for conformity to specification and assembled in a dedicated and specially equipped prototyping area.

And, every step is documented, with photographs, for precise tuning of the assembly process once it goes into production.

Tested in all conditions

Once assembled, every aspect of the prototype is fatigue tested.

Every operating parameter is monitored by computer to detect any anomalies. Each prototype is subjected to up to 600,000 cycles of loading, to simulate 10 years of normal crane operations.

Field test

New cranes are delivered to expert users to be used in real, day-to-day operating conditions, including heavy duty applications.

Direct communication between the user and R&D allows feedback for improvements.

Cranes are launched only after a complete field testing programme.

Stability control systems (CE)

HS System

The **HS System** integrated in the load limiting device checks the stabilizers' positions. Only when all beams are fully open and all stabilizers are on the ground the crane can operate and lift loads.

Control display

HM System

The **HM System** integrated in the load limiting device checks the stabilizers' positions. Only when all beams are fully open and all stabilizers are on the ground the crane can operate and lift loads.

Control display

HML System

The **HML System** integrated in the load limiting device checks the stabilizers' positions. Only when all beams are fully open and all stabilizers are on the ground the crane can operate and lift loads.

HL System

The **HL system** checks the stabilizers' positions and the truck's inclination.

According to the beams' positions, the system allows two operating modes:

Mode A - all beams fully open and all stabilizers feet on the ground.

Mode B - stabilizers on the ground only.

In **mode A**: the load limiting device stops the crane when the crane reaches 100% of the nominal capacity.

In **mode B**: a dedicated sensor monitors the truck's inclination. The load limiting device stops the crane before it reaches an inclination angle dangerous for stability, or when the crane reaches its nominal capacity.

Control display

HXL System

The **TCU** checks the positions of the stabilizers beams, monitoring for two possible positions: beam fully open, beam not fully open.

Depending on the position of the beams and the stabilizers, the crane's lifting capacity changes according to the setting made by the installer. This allows the operator to use the crane even with a beam partially or fully retracted without having stability problems.

Optional HRCS

The Rotation Control Sensor constantly checks the slewing position of the crane and limits the lifting capacity depending on the beams' and the stabilizers positions.

⊛ The percentages present in the pictures are merely examples and they have no bearing on the cranes' real lifting capacities. The cranes' real lifting capacities will depend on truck's stability.

H2XL System

The **TCU** checks the positions of the stabilizers and divides the working area into 4 slewing sectors: over the cabin, right side, left side and the rear of the vehicle.

Depending on the position of the beams and the stabilizers, the crane's lifting capacity changes according to the settings made by the installer. This allows the operator to use the crane even with a beam partially or fully retracted without having stability problems.

HPES The **HPES** (Proportional Encoder Sensor) recognizes 3 positions of the stabilizers' beams: fully open, half extended, fully closed.

HRCS The **HRCS** (Rotation Control Sensor) recognizes 4 slewing sectors: over the cabin, right side, left side, to the rear of the vehicle.

The **CAN-BUS** radio-control allows the operator to know the positions of the stabilizers and the loading conditions of the crane.

With manual opening stabilizers, the **H2XL System** only recognizes completely open or completely closed beam positions.

⊛ The percentages present in the pictures are merely examples and they have no bearing on the cranes' real lifting capacities. The cranes' real lifting capacities will depend on truck's stability.

Stability control systems (CE)

H2XL+ System

The TCU detects the positions of the stabilizers and divides the working area in 8 slewing sectors: 2 over the cabin, 2 on right side, 2 on left side and 2 to rear of the vehicle. Depending on the stabilizers spreads, the crane's lifting capacity changes according to the parameters set by the installer. This allows the operator to use the crane even with stabilizers partially or fully retracted always ensuring stability and safety.

 The HPES (Proportional Encoder Sensor) recognizes 4 positions of the stabilizers' beams: fully extended, 2/3 extended, 1/3 extended and fully retracted.

 The HRCS (Rotation Control Sensor) recognizes 8 slewing sectors: 2 over the cabin, 2 on right side, 2 on left side, 2 to rear of the vehicle.

⊛ The percentages present in the pictures are merely examples and they have no bearing on the cranes' real lifting capacities. The cranes' real lifting capacities will depend on truck's stability.

H3XL System

With a 3" TFT display and ergonomic keyboards, the operator can supervise the crane working and select the best parameters for effective use. The H3XL system controls proportional slewing and the crane's stability, with 2-steps (H3XL₂) or 3-steps (H3XL₃) stabilizers outreach monitoring, depending by crane model and configuration.

⊛ The percentages present in the pictures are merely examples and they have no bearing on the cranes' real lifting capacities. The cranes' real lifting capacities will depend on truck's stability.

H4XL+TOP System

A 7" colour display with integrated keyboard gives the operator a higher level of awareness of the crane operation and allows selection of the best parameters for effective use. The system detects the exact position of the beams and proportionally calculates the stability.

Technical features

EES Extra Extension Speed

A special regenerative valve re-uses oil during extension, ensuring an incredibly high speed without compromising the safe operation of the crane.

Extensions speed comparison

Model	2S	3S	4S	5S
Standard	22"	32"	42"	51"
EES	10"	16"	22"	29"

SDS Smooth Descent System

This system compensates for boom oscillation, ensuring smooth movement of the load.

TCU Total Control Unit

TCU is a monitoring system designed by Hyva Crane to control all aspects of crane operation, including control of accessories. A display shows the user the state of the crane and easy on-board diagnostics allow the technician and dealer to inspect the activities of the crane.

LCS Lift Control System

Lift Control System increases the capacity of the crane up to 10% by reducing the speed when the crane is near its maximum lifting capacity.

P-LCS Proportional Lift Control System

The proportional system increase the capacity up to 15% by a proportional speed reduction when the crane is near to the maximum lifting capacity.

LAS Liftrod Articulating System

Thanks to the connecting rods the lifting capacity of the crane is constant in all boom positions.

Magic Touch

Focus on innovation

A graphic display which allows the driver, after truck stabilisation, to automatically fold (from any position to transport position) and unfold (to working position) when required. This easy-to-use function improves driver attention, promotes safe operation, saves time and can increase productivity.

DLD Dynamic Load Diagram

Focus on innovation

A new system which allows the driver to verify in advance the crane lifting capacity based on the truck stability. The operator can select the weight and, according to the stabiliser positions, the system calculates the stability all around the truck. A graphical display shows the outreach available for the load selected and the actual boom slewing position. This system, a first on truck-mounted articulated cranes, optimises stabilisation and makes crane operation safer and more efficient. Easy to use, saves time and improves safety through better crane stabilisation and avoidance of border line working conditions.

Radio Remote Controls

Single hand proportional system
The power in your hands

■ **Safety**
Stabilizer control by radio

■ **Functionality**
Proportional speed control of any single movement

Proportional speed control

■ **Comfort**
Single-handed control of every crane function

■ **Ergonomic**
Compact dimensions and reduced weight

Batteries type AA standard

Pressure compensated inlet section: BOSCH

Multifunction radio controls

■ Move around the truck freely

Pressure compensated control valve: HAWE PLS2

Pressure compensated control valve: SAUER DANFOSS PVG32

EDGE LINE RAISE YOUR GAME

NEW EDGE line cranes from Hyva, cutting edge innovation for 1st class lifting experience.

A new control station, incorporating both crane and stabiliser controls, has an ergonomic working position and user-friendly interface which delivers better operator efficiency and safety together with improved productivity.

Dynamic Load Diagram allows advance verification of the crane lifting capacity based on the truck stability, and, Magic Touch allows automatic folding and unfolding to transport and working positions.

There are several options for radio remote control and a wide range of stabiliser configurations to ensure safe positioning of the truck in all ground conditions.

The wide slewing angle, 425°, is best-in-class for medium sized cranes. And, with an extensive range of accessories and attachments, the cranes are suited to a wide range of applications.

Durability and lifetime value too is high with enhanced resistance to adverse environmental conditions as a result of a long life painting process, anti-corrosion treatments on non-painted components, protected rubber hose tracks and assembly of components using specialist tools.

Best in class articulated cranes.
 For heavy users who require ultimate precision and lifting capacity.
 Packed with innovation, the HC line offers a wide range of accessories besides the already standard incorporated features

SPECIALIZED CRANES FOR AGRICULTURAL TRACTORS

Uniquely engineered to support advanced applications in the agricultural industry, the FFB line boosts the productivity and efficiency while enhancing the speed and safety of harvesting activities.

Easy and Safe

Easy to use and maintain

All the greasing point are in a easy to access position.

Cable controls

Connection by cable controls allow an easy installation and a higher safety for the driver.

4 functions control valve by Walvoil

7 functions control valve by Hidrocontrol

Strong and reliable

Structural design in accordance with: EN12999

Quality ISO9001: 2008 certified

Production from the raw metal to the crane ready to be installed is controlled by quality procedures certified by Lloyd's register according to ISO9001.

Long life painting

Painting process is made to allow the best quality possible and ensure a long crane life in all the applications and environments.

- A - Iron grid sandblasting
- B - Cathodic electrodeposition paint
- C - Yellow polyester powder paint

Hexagonal boom

The use of this technology brings superior performance, reduced maintenance, and less adjustment.

Strong and reliable

Rack and Pinion heavy duty slewing

Double rack and pinion heavy duty slewing

The use of two racks spread the force across twice as many teeth on the pinion. Slewing has more strength for difficult situations.

Internal extension cylinder

Full packages

3 Jaws grab

Self weight: 35 kg
Capacity: 50 dm³

4 jaws grab

Self weight: 75 kg
Capacity: 100 dm³

box grab

Special attachment for bulk material

Oil tank

Steel oil tank made to be installed on the back of the tractor including oil filter and level indicators.

HZR

SPECIALIZED CRANES FOR RECYCLING APPLICATIONS

Designed specifically to meet the needs of recycling applications, the HZR is available in foldable (Z) and non-foldable (L) versions.

With a wide range of models and versions, these cranes are the perfect solution for scrap and container handling from 8 to 25 tm. Offering high-speed performance, it's perfect one-stop solution when combined with Hyva hookloaders and attachments.

HZT

SPECIALIZED CRANES FOR TIMBER APPLICATION

Designed specifically to meet the needs of timber applications, the HZT offers exceptional performance, high flexibility and a wide choice of accessories. With a wide range of models and versions, these cranes are the perfect solution for wood transport from 4 to 27 tm.

Foldable (Z) and non-foldable (L) versions are available.

The Kenniss Concept - Maximize The Haulage Payload And Increase Your Productivity.

Fast Operation

Longer Useful Life

Efficient, Simpler & Safer For Users.

Improved Driving Condition

Maximum Payload

HIGH LIFTING CAPACITY AND LOW TARE

The complete Kennis Rolloader concept is the combination of a light crane, light attachment and equally important a light trailer. Kennis Rolloader Cranes are made to perform many cycles at high speed and with exceptional precision. With a lightweight, compact design and a short boom, Kennis cranes can do the same heavy job with a lower load moment (capacity) than a heavy rear mounted crane which will require a long boom. The steel structures of crane and crane equipment have been engineered to perform and endure tough heavy duty load cycles making the crane fast, extremely robust and durable while still very safe to operate.

UNRESTRICTED VIEW FROM ITS ERGONOMIC CONTROL

- Better visibility so as to view loading and unloading operations.
- Simple, safe intuitive control.
- Precise and advanced top seat control with levers or four-axis joystick control and foot pedals.
- Ergonomically designed topseat and crane control joysticks improves comfort leading to efficiency, and also increases safety.

RADIO REMOTE CONTROL

Multifunction radio remote control allows the operator to move 2-3-4 or more functions of the crane simultaneously, and to move freely around the trailer and keep control of the load position.

ENVIRONMENTALLY FRIENDLY

- Lower total tare weight so maximum payload is transported.
- Self-propelled crane with its own high performance fuel efficient power unit.
- Variable displacement pump using optimum power resulting in less fuel consumption.

EFFICIENCY

- Faster loading cycle speeds.
- Load/ Unload independently without the use of any other handling equipment on site.
- The crane operation is closer to the load with a shorter boom maximizing the load capacity.
- Self-propelled powered base eliminates the necessity of moving your truck while loading, saving valuable time.
- A precise control of the crane's movement and for accurate placing of the load.
- Easily offload the crane from the trailer.

LONGER USEFUL LIFE

A Kennis crane mounted on the trailer outlasts the useful life far longer than the tractor head truck. Different fleet of tractor heads can also be used for multiple other applications making the operations more flexible as it does not need to have specially fitted hydraulic kits to power the crane.

- Continuous slewing
- Hexagonal boom sections
- Twin high performance lift cylinders

E-Power helps to meet increasingly demanding environmental regulations, with direct tax benefits for the customers in certain countries.

BATTERY PACK AND MOTOR

Electric motors used, feature Kennis integrated electric motors (IEM) and batteries with a new generation of power semiconductors, to achieve best in class efficiency.

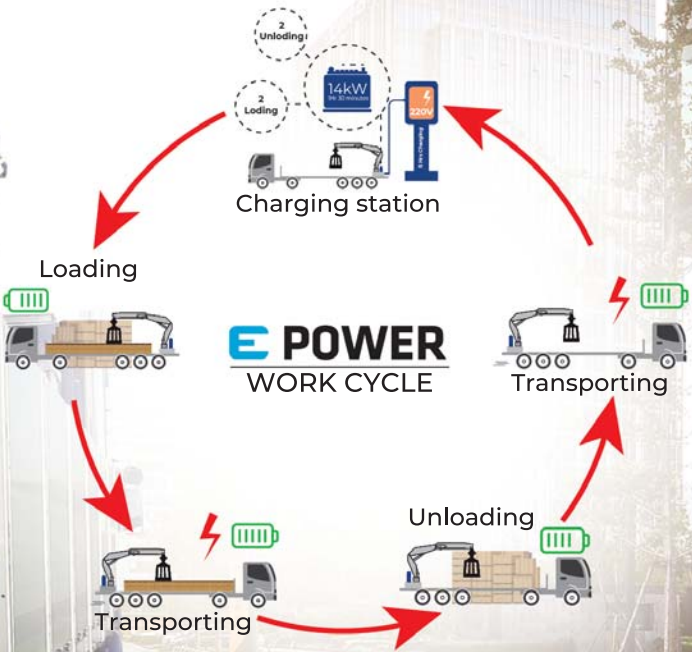

CONSTANT TORQUE

Kennis electric motors matches robustness and power by providing the correct torque and constant angular speed to drive the hydraulic pump.

URBAN USE

The electric crane solution is ideal for urban areas and can be operated when the truck engine is switched off.

Kennis e-power cranes lead a pioneering role in the field of electrification and are the latest high-performance innovations, maintaining the best advantages in service and payload.

GOING THE EXTRA MILE

Kennis ORRS (On-Road Recharging System). provides energy to recharge service battery from traction battery energy.

FAST RECHARGE

High capacity battery pack, built to deliver maximum energy, without compromising power performances. Battery Management System (BMS) guarantee efficient thermal management, high battery performance and safety.

EFFICIENT ENERGY DISTRIBUTION

High voltage power connection provides for the use of shielded cable with high efficient inner core cross section area.
